Tornado in Apex Community Park - Baseball Fields, Apex, NC

MODERATE

SPRING

On a warm, clear evening of May 15th, 2024, a highly localized EF-1 tornado unexpectedly touched down in Apex, NC, directly impacting the Apex Community Park during a little league baseball game. The tornado, characterized by its sudden appearance and rapid dissipation, struck at approximately 6:30 PM. The primary impact zone was Baseball Field #3 and its immediate surroundings, where a game was in progress with dozens of children, coaches, and parents present. The tornado caused significant damage to the outfield fence, dugout structures, and the press box. Debris, including aluminum bleachers, advertising hoardings, and tree branches, was scattered across the fields and parking lot. Several vehicles in the parking lot sustained damage from flying debris. Power lines

connected to the park's lighting infrastructure were downed, leading to localized power outages and creating immediate hazards. Initial reports indicate multiple injuries, ranging from minor cuts and abrasions to suspected fractures and head trauma, particularly among those caught outdoors or seeking shelter in compromised structures. There are concerns about potential entrapments under collapsed structures or heavy debris. Panic and disarray immediately followed the impact, with parents searching for children and emergency services being overwhelmed with calls from the park and surrounding areas.

Event Timeline

2024-05-15 18:25

Weather radar indicates unusual, rapidly forming rotation near Apex Community Park, with no prior tornado watch or warning specifically for this micro-event.

2024-05-15 18:30

EF-1 tornado touches down at Apex Community Park, directly impacting Baseball Field #3. Immediate damage to structures, fences, and vehicles. Power lines downed, causing localized outages.

2024-05-15 18:32

First 911 calls received from the park, reporting injuries, chaos, and significant structural damage. Widespread panic ensues among attendees, with parents frantically searching for children.

2024-05-15 18:35

Emergency services (Apex PD, Apex Fire, Wake County EMS) dispatched to Apex Community Park. Initial reports suggest a Mass Casualty Incident (MCI) due to multiple reported injuries and potential entrapments.

2024-05-15 18:45

First responders begin arriving on scene, encountering significant debris, anxious crowds, and challenges in establishing scene control and access for emergency vehicles.

HAZARD TYPE

Tornado

Cascading Effects Analysis

1

Fire Agent

CAUSE

Downed power lines and damaged structures (press box, field lighting infrastructure) at Apex Community Park, resulting from the EF-1 tornado.

EFFECT

Ignition of an electrical fire within the compromised press box structure or amidst accumulated debris, due to short-circuiting and arcing from

damaged electrical lines coming into contact with flammable materials.

IMPACTED SYSTEMS

Fire suppression services (Apex Fire Department)

Search and Rescue (SAR) operations (complicated by fire, smoke, and further structural instability)

Public safety and emergency medical services (EMS) (increased hazard for injured individuals and responders)

Park infrastructure (further damage to facilities)

Air quality (due to smoke and potential hazardous combustion byproducts)

PROBABILITY

 80%

2

Medical Agent

CAUSE

Significant influx of trauma patients, including critically injured children and adults, from the EF-1 tornado at Apex Community Park, triggering a Mass Casualty Incident (MCI) declaration.

EFFECT

Local hospital emergency departments, particularly WakeMed Apex Healthplex and potentially neighboring hospitals in Cary and Raleigh, rapidly exceed their operational capacity. This leads to extended wait times in the ED, depletion of critical medical supplies (e.g., blood products, intubation kits), and severe strain on medical staff. Consequently, non-MCI related emergencies may experience significant delays or require ambulance diversion, creating a secondary public health concern as routine critical care is impacted.

IMPACTED SYSTEMS

Hospital Emergency Departments

Critical Care Units (ICUs)

Surgical Services

Blood Banks

Emergency Medical Services (EMS) dispatch and transport

General Public Health (due to reduced access to care for non-MCI patients)

PROBABILITY

 90%

3

Police Agent

CAUSE

Widespread panic and parents searching for children following an EF-1 tornado strike at Apex Community Park, combined with severe traffic congestion and downed power lines.

EFFECT

Frustrated and anxious community members, particularly parents, attempting to access the park to locate loved ones, will disregard police-established traffic control points and emergency perimeters. This will lead to unauthorized vehicle and pedestrian incursions into active emergency zones, creating significant safety hazards, impeding critical emergency vehicle access, and potentially escalating into public order disturbances as police work to maintain scene security and control.

IMPACTED SYSTEMS

Emergency access routes

Public order and safety

Emergency response efficiency

Scene security
